Figure 1. The effect of the number of trials on the number of correct responses. The number of correct responses was significantly higher than the number of incorrect responses in all cases. The number of correct responses was significantly higher than the number of incorrect responses in all cases. The number of correct responses was significantly higher than the number of incorrect responses in all cases.

Figure 1. The proposed system architecture. The system is composed of three main components: a user interface, a data management system, and a decision support system. The user interface interacts with the data management system, which in turn interacts with the decision support system. The decision support system provides recommendations to the user interface.

的采样程序应预先编写并存储在采样站和/或采样设备中。

执行。
